

How to Install WordPress on Bluehost

Sunday, November 07, 2010
8:01 PM

- 1) Go to www.bluehost.com and click Control Panel Login in the top right corner.
- 2) Refer to the Handbook, the New LIS Website Document, or your email for the Username and Password.
- 3) Under "Frequently Accessed Areas," click on MySQL Databases
- 4) Under Create New Database, give your database a name and click "Create Database."

Create New Database

New Database:

- 5) On this page click "Go Back."
- 6) Under "Add user to Database" select your user (ends with admin) and then select your database name (whatever you called it in step 4).

Add User To Database

User:

Database:

- 7) Click "Add."
- 8) Select "All Privileges" check box and hit "Make Changes."

MySQL Account Maintenance

Manage User Privileges

User:

Database:

<input checked="" type="checkbox"/> ALL PRIVILEGES	
<input checked="" type="checkbox"/> SELECT	<input checked="" type="checkbox"/> CREATE
<input checked="" type="checkbox"/> INSERT	<input checked="" type="checkbox"/> ALTER
<input checked="" type="checkbox"/> UPDATE	<input checked="" type="checkbox"/> DROP
<input checked="" type="checkbox"/> DELETE	<input checked="" type="checkbox"/> LOCK TABLES
<input checked="" type="checkbox"/> INDEX	<input checked="" type="checkbox"/> REFERENCES
<input checked="" type="checkbox"/> CREATE ROUTINE	<input checked="" type="checkbox"/> ALTER ROUTINE
<input checked="" type="checkbox"/> CREATE VIEW	<input checked="" type="checkbox"/> SHOW VIEW
<input checked="" type="checkbox"/> CREATE TEMPORARY TABLES	<input checked="" type="checkbox"/> EXECUTE

- 9) Click "Go Back."
- 10) Now to go www.wordpress.org
- 11) Click on "Download WordPress #" (the # refers to whatever version they're up to).
- 12) Click "Download WordPress #" again.
- 13) Save to your Desktop. You'll be deleting it later so this is okay.
- 14) Unzip your WordPress download by clicking on it and selecting "Extract Here."
 - a. This is if you [Winrar](http://www.winrar.com) installed.
- 15) The following is found under "[Famous 5-Minute Install](#)"
 - a. Rename the wp-config-sample.php file to wp-config.php.
 - b. Open wp-config.php in a [text editor](#) and [fill in your database details](#)

16) Look for:

```
// ** MySQL settings - You can get this info from your web host ** //  
/** The name of the database for WordPress */  
define('DB_NAME', 'database_name_here');  
  
/** MySQL database username */  
define('DB_USER', 'username_here');  
  
/** MySQL database password */  
define('DB_PASSWORD', 'password_here');  
  
/** MySQL hostname */  
define('DB_HOST', 'localhost');
```

17) Change "database_name_here" to the full name that Bluehost gave you (in our case it is the name from step 4)

18) Add in your admin username and password. You have access to this in "New LIS Website Document."

a. Also probably in your email and probably in the Handbook.

```
// ** MySQL settings - You can get this info from your web host ** //  
/** The name of the database for WordPress */  
define('DB_NAME', 'lis_2019_2020');  
  
/** MySQL database username */  
define('DB_USER', 'lis_2019_2020');  
  
/** MySQL database password */  
define('DB_PASSWORD', 'lis_2019_2020');  
  
/** MySQL hostname */  
define('DB_HOST', 'localhost');  
  
/** Database Charset to use in creating database tables. */  
define('DB_CHARSET', 'utf8');  
  
/** The Database Collate type. Don't change this if in doubt. */  
define('DB_COLLATE', '');
```

19) Hit CTRL and S at the same time to save the new file.

20) Go ahead and close your text editor.

21) Open your FTP program and enter your usual admin login information

a. You have access to this in "New LIS Website Document."

b. Also probably in your email and probably in the Handbook.

22) Double click on public_html

23) In the left hand panel of your FTP program you will need to navigate to your Desktop to get the WP folder.

a. Generally just scroll all the way to the top and click once to bring up the Desktop in the window below it.

24) Now right click on the folder labeled "wordpress" and rename it to reflect your what you're building. I suggest making it the same name as your database. For my example it is "test."

a. This is not the only way to do this, but it's the method I'm using it.

25) Now left click and hold. Drag your folder to the right panel (which is your server). **Make sure that it does not accidentally go into another folder!** Once you have it in it's own space, stop holding the left mouse button.

a. Your folder is now uploading to the server.

b. You don't want it going into another folder because you want your website address (for this project) to be <http://lis.uncg.edu/namefromstep24>

i. Mine will be <http://lis.uncg.edu/test>

26) Now go to your address and you should see the URL change to:

<http://lis.uncg.edu/test/wp-admin/install.php>

- a. Remote the "test" portion is my folder name. Your's will be different.
- b. If the WordPress Welcome screen does not show up, add the /wp-admin/install.php to your URL.

WordPress

Welcome

Welcome to the famous five minute WordPress installation process! You may want to browse the [ReadMe documentation](#) at your leisure. Otherwise, just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.

Information needed

Please provide the following information. Don't worry, you can always change these settings later.

Site Title

Username

Names can have only alphanumeric characters, spaces, underscores, hyphens, periods and the @ symbol.

Password, twice
A password will be automatically generated for you if you leave this blank.

Strong

Hint: The password should be at least seven characters long. To make it stronger, use upper and lower case letters, numbers and symbols like ! * ? \$ % ^ & .

Your E-mail

Double-check your email address before continuing.

Allow my site to appear in search engines like Google and Technorati.

- 27) Fill in the required fields.
- 28) You can uncheck the last box if you don't want search engines to list you in their indexes.
 - a. It is recommended to change the Username to something that isn't "admin."
- 29) Click "Install WordPress."
- 30) You'll see a screen that says "Success!"

WordPress

Success!

WordPress has been installed. Were you expecting more steps? Sorry to disappoint.

Username

Password

- 31) Click "Log In" and enter your information.
- 32) **DONE!**
